

## Hotel Management System

The hotel management system project comprises of following files:

1. hms.sql – the main file to run the project which contains all the queries.
2. hotel\_management\_system\_backup.sql – contains backup with all the data to run it on any machine.
3. IRS\_Project.pptx – Presentation File
4. readme.pdf – Installation procedure

## Database Structure

## Importing database in MySQL

The guideline provided below allows you to import the database and run the queries. Import can be done via CLI or from MySQL Workbench (Windows Version). This document covers how to import the backup database via CLI.

### Importing via CLI

The database should be in the same directory in order to import using the given command.

1. Login to your mysql using following command

```
mysql -u <username> -p
```

2. Create a new database with the name as hotel\_management\_system

```
CREATE DATABASE hotel_management_system;
```

3. Use the database created

```
USE hotel_management_system;
```

4. Import the database

```
source hotel_management_system_backup.sql;
```
